- 13 power is turn off the plants instead of dumping it here
- 14 in Nevada.
- One of the reasons I picked Nevada -- I'm
- 16 from the East Coast -- it's one of half a dozen that
- 17 don't have the nuclear power plant. They had the
- 18 misfortune that had a power test, but it's before most of
- 19 our times. They did a -- from Seabrook, New Hampshire to
- 20 Adamneck, I think it's called, Connecticut, they were
- 21 going to move nuclear waste. This is 1975-ish. It was
- 22 in the news, in the newspaper, how safe it's going to be,
- 23 how it's going to be escorted safely in a super-cool
- 24 container.
- 25 The next morning -- I worked in a

28

- 1 slaughterhouse, and I was doing the slaughterhouse run --
- 2 on Route 52 -- it's 395 now -- there's one of these
- 3 overpasses, Route 138, I believe it is, the difference in
- 4 elevation, guess where the nuclear truck stuck? It stuck
- 5 in the bridge. It was on the thing, on the newspaper, in
- 6 the news.
- 7 In the package that I got from your

29

| 8 | department, it said 100,000 I mean a 10,000-year plan. |
|----|--|
| 9 | That's 25 generations. Our history, including |
| 10 | archeology, doesn't go back 15 generations, and about |
| 11 | five generations of that is modern-day research. We |
| 12 | don't know what the ground is going to do. It could be |
| 13 | in the water table in the future, and the plan for |
| 14 | shutting down a present-day reactor is to fill it around |
| 15 | with concrete and steel. Well, that's where the waste is |
| 16 | now. Leave it there. Shut it down. |
| 17 | These are trillion-dollar projects, several |
| 18 | sets of trillions of dollars. They're not regulated by |
| 19 | insurance; taxpayers pay for it. You can't pay for |
| 20 | something. I can't pay for my granddaughter being I |
| 21 | love to read, I like to use a night light. I don't want |
| 22 | to glow in the dark. |
| 23 | There are aspects to nuclear containment |
| 24 | where it's not as dangerous as it is except when |
| 25 | terrorists attack, one mistake, one truck, one railroad, |
| | |
| 1 | one earthquake. Yucca Mountain doesn't have to move, but |
| 2 | if another part of the plate moves, water we have no |
| 3 | way of knowing what's going to happen in 10,000 years. |

Concrete crumbles. It gives off heat, it says, below the

| 5 | boiling point. That's with ventilation. What happens if |
|----|---|
| 6 | those ventilation shafts get sabotaged? Will it just |
| 7 | fuse a big glass chamber, what the tunnel is going to be, |
| 8 | and for trillions and trillions of dollars. |
| 9 | For a billion dollars I have friends that can |
| 10 | set up a wind turbine system that can produce a thousand |
| 11 | megawatts. That's the same as a nuclear power plant. |
| 12 | That ensures work, makes work for people, and you just |
| 13 | keep rebuilding it, and maybe I'm sure accidents can |
| 14 | happen with one of those things corrupting, too. |
| 15 | And that's one of the reasons I picked this |
| 16 | part of the country, clear blue skies, clear air, and I |
| 17 | lived down south for a while, and I got to a point that |
| 18 | every time I went to pour water out of my tap and I |
| 19 | had all kinds of filters I thought, that's not going |
| 20 | to filter out nuclear radiation. If it's there, you |
| 21 | know, we can't |
| 22 | Our whole plant is nuclear anyway. We've |
| 23 | concentrated it. So we've got a twofold problem: We got |

30

24

25

1 We've got to stop it. It should never have gone beyond

it, we're using it, we blew people up with it, including

our own people. We've got to start shutting it down.

Reno Public Meeting October 4, 2001

- 2 the experimental stage. There's a lot of alternatives to
- 3 it. It's mega money, there's a lot of investment,
- 4 stocks, power, and there's a lot of answers, but the
- 5 first thing to do, shut it down, bury it where it's at.
- 6 I could probably go on forever, but I'm kind
- 7 of nervous.
